Dear Hiring Manager,

I am writing to apply for the Junior Deployment Engineer position. As a Software Engineering graduate from Ruppin College with hands-on experience in Linux/Windows environments, SQL databases, and scripting, I am excited about the opportunity to contribute to your team in Netanya.

During my studies I worked extensively with command-line interfaces on both Linux and Windows, managed SQL Server databases (stored procedures, queries, data analysis), and built full-stack applications that required configuring network components and troubleshooting deployment issues. My CCNA certification from Cisco Networking Academy gave me a solid foundation in TCP/IP, ports, firewalls, and networking concepts that directly apply to this role.

I am comfortable working with Git/GitHub, have basic scripting knowledge in Python and Bash, and have deployed web applications using Netlify. I am eager to learn CI/CD tools like Jenkins and GitHub Actions, as well as Docker and cloud environments — areas I have started exploring and am motivated to develop further.

What draws me to this position is the opportunity to grow in a structured, learning-driven environment while making a tangible impact on deployment processes. I thrive in detail-oriented work, enjoy solving technical problems methodically, and value collaboration within a team.

I would welcome the chance to discuss how my skills and motivation align with your team's needs. Thank you for your consideration.

Best regards,

Yura Volontir
